

The solution to early weaning

"On average, we save the life of half a pig per litter - that's equivalent to nearly 700 pigs a year"
James Staples

The QE Piglet Nursery Cabin has been designed to assist the stockman care for piglets where today's genetics result in high prolificacy of sows.

- Self-contained Portable Nursery Cabin for weaning of excess piglets.
- 2 or 3 rooms of twin pens per cabin
- Warm water Transition Feeders for improved early weaning
- Automatic fan and ventilation controls
- Twin thermostatically controlled heat pads in each pen
- Separate slurry tanks under each room
- Hygienic easy clean finish

Piglets are easily weaned into a safe and sympathetic environment meeting all their needs, helping the business to realise its full potential.
