

Animal Scale ETW VA

- Stainless Steel Construction
- Dimensions 1600 x 525 x 900mm
- Only 35mm step height
- Slatted anti-slip floor
- Water resistant stainless steel indicator with 30mm display
- Sorting lights with three colour status indicator
- Optional data storage (USB)
- Weight of scale only 54kg
- Only one person required to weigh the pigs due to the lever mechanism used to open the front door
- With three wheels for easy vertical transport
- Animal weighing software for exact weighing even of restless pigs
- Integrated rechargeable battery
- Pen and spray can holder
- 3 years warranty

Animal Scale ETW VA

The animal scale ETW VA is a stainless steel animal scale with following key features:

- **Easy transport**

The scale is equipped with three wheels for easy vertical transport. Two large solid rubber wheels (150mm) and one retractable guide wheel will allow to move and store the scale easily, even on an uneven ground. A 180° degree turn in a narrow aisle is not a problem. Also, the indicator can be collapsed for transport which will protect it.

- **Low step height and slatted floor**

The step height of this scale is only 35mm. Therefore pigs can easily enter and leave the scale. Every scale is equipped with a slatted anti-slip floor. This avoids the collection of dirt onto the scale and it is easy to clean.

- **Stainless steel construction and load cells**

The complete scale frame and the load cells are made of stainless steel. It is easy to clean and maintains its shape and structure over years. The material has been proven over decades in the farm environment. The load cells are sealed in a special laser welding process.

- **Compact stainless steel indicator with 30mm display**

The stainless steel display unit has been specifically designed for the ETW VA. The 30mm high digits are backlit and clearly readable from every angle. The folding mechanism is very practical in use.

- **Sorting lights with 3 colour status indicator**

The indicator is equipped with a three colour status

indicator. The target weight can be entered, a “traffic light system” will indicate the weight of the animal: Green for the correct target weight, yellow for too light animals and red for too heavy animals. Colours are easier to compare than numbers and will speed up the weighing process.

- **Optional data storage**

All recorded weights can be stored in the indicator with the date and time and can be transferred to a USB-stick. The data can be archived and evaluated on any Windows PC with help of the included software.

- **Easy to use**

Only one person is required to weigh the pigs due to the lever mechanism used to open the front door. The indicator was developed to weigh animals and does not have any confusing additional functions. The data can be transferred to a USB stick any time.

- **Pen and spray can holder**

The holder is made from highly durable material and has space for two pens and cans. The diagonal arrangement prevents them falling out when transporting the scale vertically.

- **Lowered frame backward**

The particular geometry of the frame ensures that the animals like entering the scale. The lowered front part of the scale and the clear view through the latticed sides keep the animal calm. The rear of the scale is higher and prevents the animal from jumping over. Transport will be easy due to the compact construction and mobility of the scale.
